

You're invited to the

2018 Vision Research Seminar

Date: Friday, Oct. 26, 2018

Time: 8:30AM

**Location: Telemedicine Theater B001 room in
Medical Education Building**

**Title: Previously unnoticed O-glycosylation of
human red and green cone opsins**

Presenter: David Salom, Ph.D.

Abstract: Rod and cone photoreceptors are structurally similar, but they also show fundamental differences. With the help of an in-house raised monoclonal antibody we have discovered that red and green cone opsins are O-glycosylated at the N-terminus, which could explain some of these differences.
